ASC Solar now offering no money down financing for residential solar installations.

With sky high energy costs at an all time high, renewable energy has been the buzz of the energy industry for consumers at all levels. As the government has stepped up their commitment to reward consumers who invest in this environmentally friendly effort, the demand for solar energy in households around the country has skyrocketed.

Who wouldn't want to get paid to use electricity while giving back to the environment? Obviously the masses want to chip in, but few have the wallets thick enough to play their part. With initial financing hurdles scaring away hordes of interested consumers, there's been a major need for certified electricians to team up with financial heavyweights.

ASC Solar, a full service renewable energy supplier based in South Jersey and servicing the entire Tri State, is proud to announce an amazing offer to help deliver the cost saving benefits of residential solar installation and help solve the industries answer to near-impossible financing issues.

With a strategic decision to partner up with Lyon Financial, ASC Solar is now offering a no money down, same as cash financing solution which is free of any payments for a full 365 days. This financing option allows families faced with rising energy bills to get approved for residential solar panel installations which normally require an upfront commitment of thousands of dollars and an immaculate credit rating.

As a staple in the renewable energy industry, ASC Solar has been providing energy saving solutions for commercial and residential properties for over six years. With a full team of expert strategic designers and certified installers, ASC Solar can help turn an energy payment into an income generating investment.

For more information on this incredible offer, contact Michael Tuman at ASC Solar. You can also learn more at their website, www.ASCSOLAR.com.
